A Formation does not guarantee persistence

Four fixed rules × two initial bodies · all eight qualify at 128 in the 64^2 domain

Rule	Trilobe	Bridged
Reference	●	①
Core ring	②	●
Double shell	●	●
Core + outer	●	●

① / ② continued; six eligible bodies not continued

Two non-rigid initial shapes

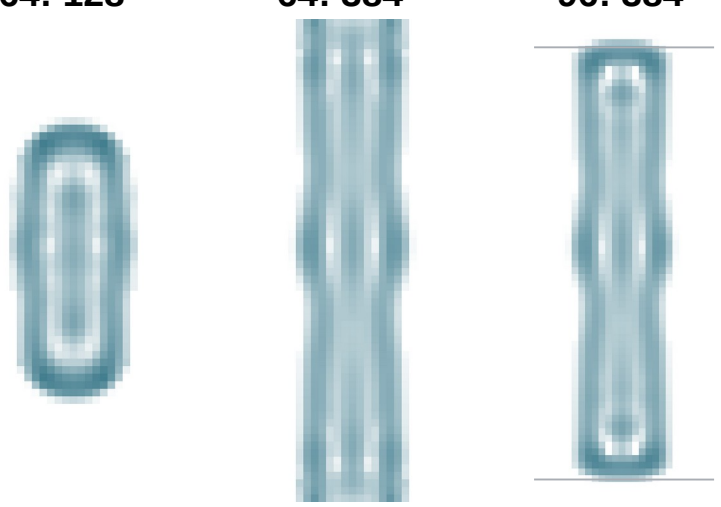

Same initial M = 71.249; E = 56.999

B Matched state 128 → paid adjacent F transport off / on

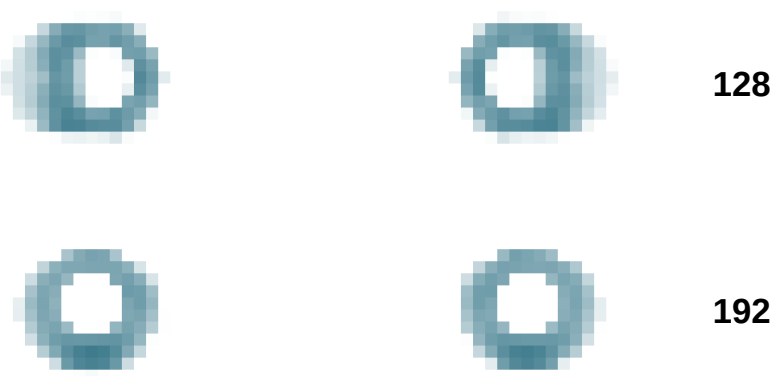

② Ring: 64 / 96 domains; both arms alive

64: 128 **64: 384** **96: 384**

64 x20–44,y0–63; 96 x36–60,y12–83

① Double blobs · 64 domain

Both exactly zero from 220 through 384

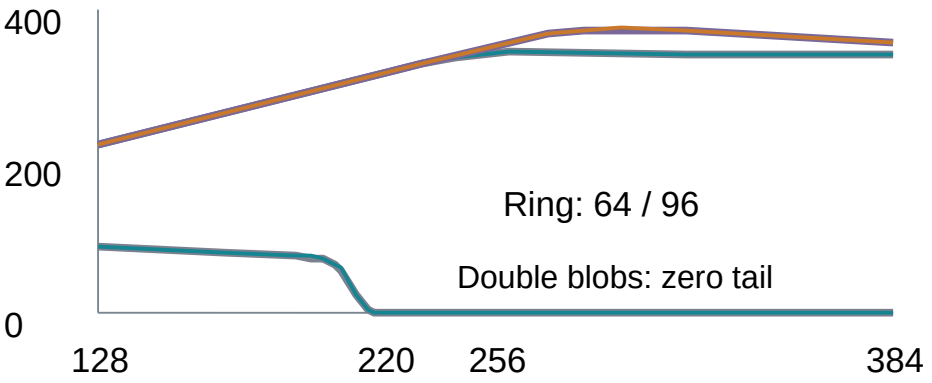

x 0–63; y 24–43 ↓; same window at both times

Transport-on fields; density ρ: white 0 → teal 1 M/cell. All fields use the same colour scale.

64: gap 7 < K_2 reach 8 at 232; 317 is not onset. 96: no new-edge contact (ρ > .01).

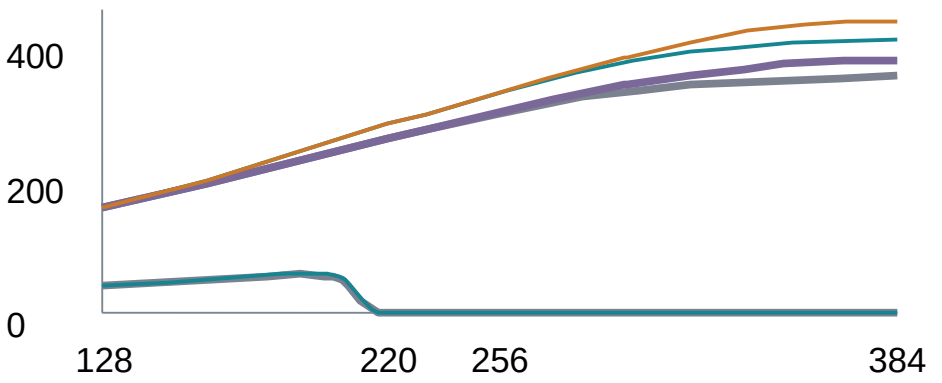

C Transport changes reserves without changing either fate

Tissue mass (M)

64: grey / teal; 96: violet / orange = off / on

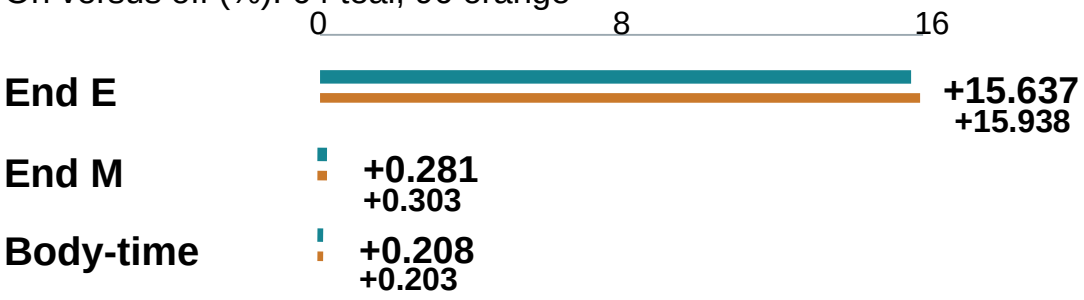

Stored energy (EU)

96: 297–384 continuous net loss

D Energy gains coexist with declining late generation

On versus off (%): 64 teal; 96 orange

Last-32 births, off / on (M)

64: 21.376 / 21.146

96: 5.026 / 4.860

On fee (64 / 96): 6.614 / 6.536 EU

ΔE: +55.077 / +59.821 EU

96 outer P = births = 0: tissue is transported in.

Learning off; domain sensitivity, not a steady state or pure boundary mediation.
