Carried evidence changes decisions after reversal

Complete parent at 1024 → update / freeze | Compact, seed …2101, α = 0.4

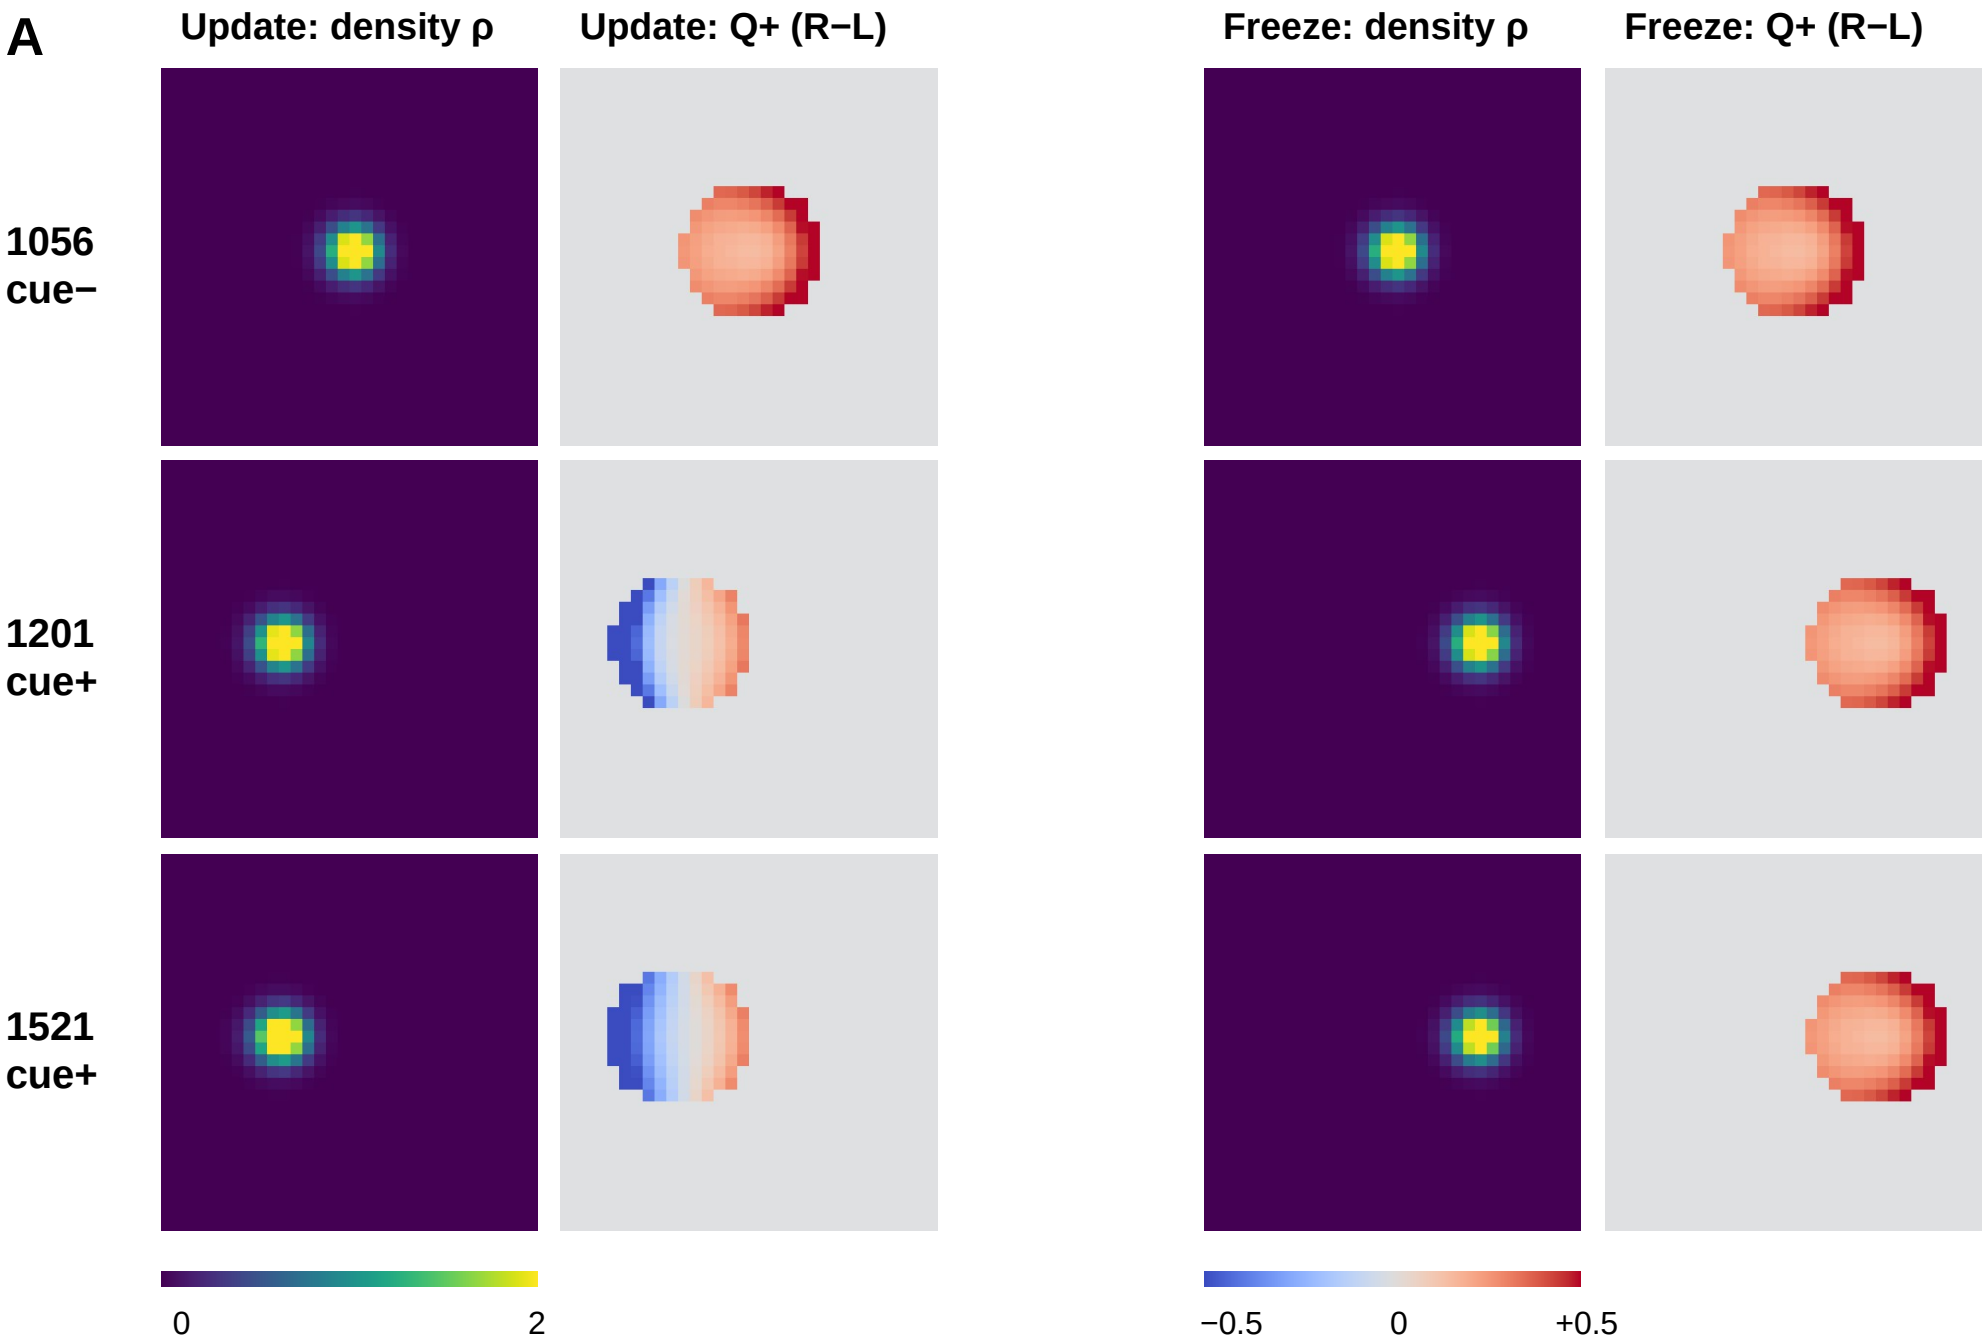

1056 First write (−cue channel)
Local write; freeze: none

1191 First action difference
Update left; freeze right

1201 Uptake difference
6.984 vs 0.000154 EU

Events from step tables. Images below are saved post-step fields, not invented intervening states.

A

Original periodic 32 × 32 coordinates. Q+ = Q(+cue,R) − Q(+cue,L); grey masks same-frame ρ < 0.001.

B All paired uptake effects: update − freeze

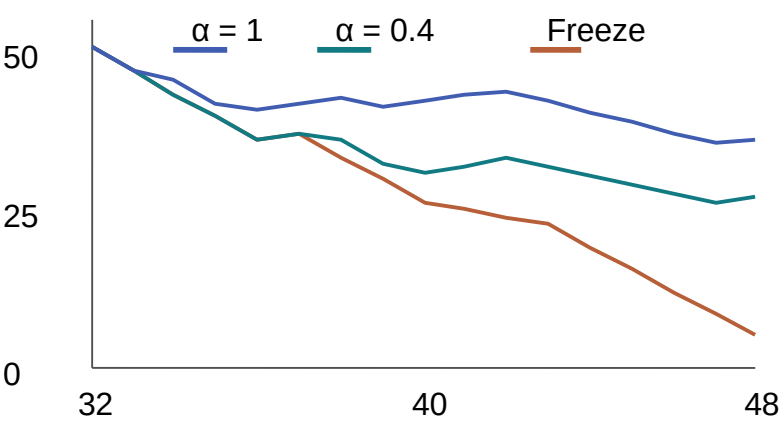

EU over 16 cycles; each cell α = 0.4 / α = 1

Context	Same	Reversal	Independent
Compact 1	0 / 0	+41.98 / +41.98	-7.00 / +7.00
Compact 2	0 / 0	+27.98 / +62.98	+0.00 / +7.00
Ring 1	0 / 0	+41.65 / +41.65	-7.00 / +7.02
Ring 2	0 / 0	+27.45 / +62.53	+0.00 / +7.03
Bilobed 1	0 / 0	+41.96 / +41.96	-7.00 / +7.00
Bilobed 2	0 / 0	+27.92 / +62.85	+0.00 / +6.99

1/2 identify the two shared tapes, not independent bodies.
Three shapes × two seeds: six dependent parent contexts.

C Uptake ≠ energy balance

Mean E (EU); completed cycles 32–48

Update ΔE: −23.91 / −14.65
(α0.4 / α1; relative to own parent)

Translated-density host; global actuator and shared energy. Freeze retains capture / payment; no new n/d content.
