Acquired gain enables responsive movement

Reversal can succeed with the acquired gain held fixed.

A A learned gain reads a preset sensory direction

Paid local outcomes → previous gradient g → **Preset direction d = g / |g|** → **Local mean = κ d + noise → paid transport**

κ starts at 0; local source-credit updates κ. No additive bias.

κ = 1 is a strong fixed control.

1–320 Acquire	321–640 Reverse	641–768 No new feedback
Paid outcomes + writes	**New relation, unannounced**	**Old records transported; writes off**

B Fixed gain also succeeds: all conditions and stages

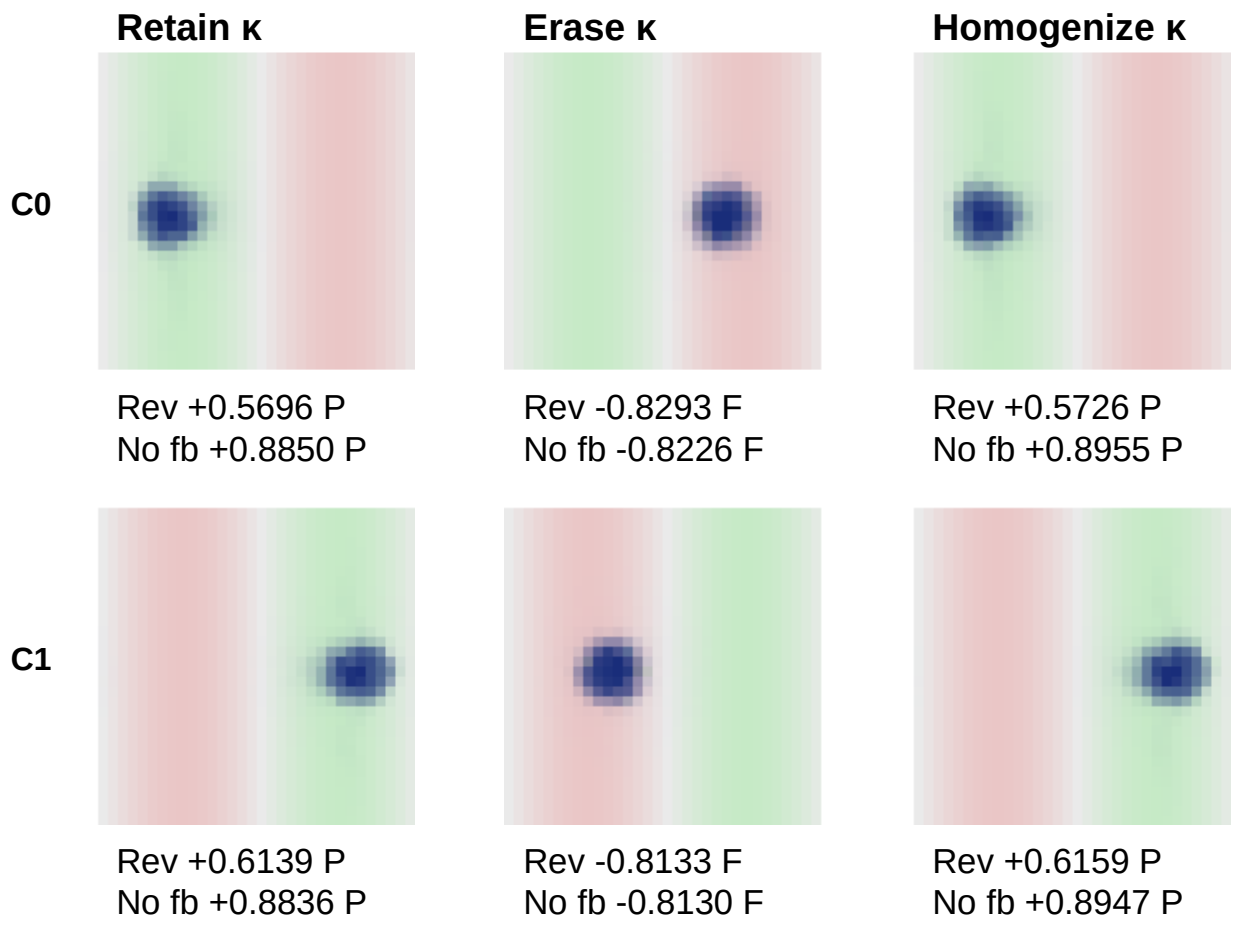

Final-64 mean body field score; P / F = pass / fail the original full gate

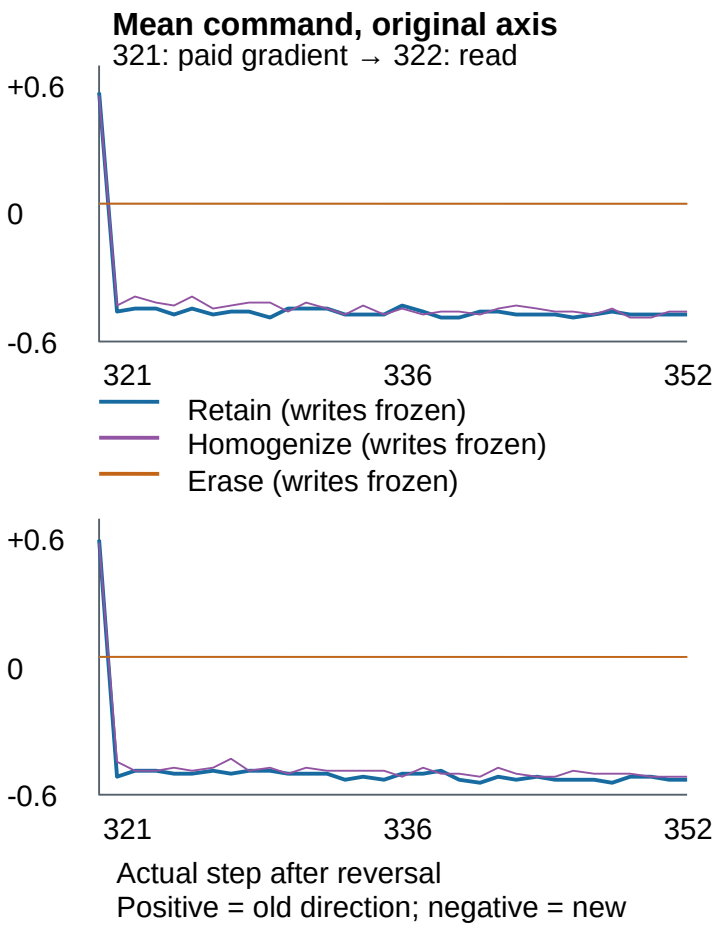

Method	Acquire	Reverse	No new feedback	All stages
Learned κ	**C0 +0.7312 P** **C1 +0.7226 P**	**C0 +0.3419 P** **C1 +0.7633 P**	**C0 +0.5714 P** **C1 +0.7883 P**	**2/2**
Fixed κ = 1	**C0 +0.9783 P** **C1 +0.9780 P**	**C0 +0.7483 P** **C1 +0.7510 P**	**C0 +0.9689 P** **C1 +0.9661 P**	**2/2**
Source bias	C0 +0.7279 P C1 +0.7177 P	C0 -0.7987 F C1 +0.0149 F	C0 -0.7307 F C1 +0.3633 P	**0/2**
Zero κ = 0	C0 +0.0197 F C1 -0.0065 F	C0 -0.0125 F C1 +0.0098 F	C0 -0.0226 F C1 +0.0208 F	**0/2**

Gate: M ≥ 12, connected fraction ≥ 0.75, score > 0.25, positive mass fraction ≥ 0.60.
C0 / C1: two opposite-field/noise conditions, not independent worlds. Occupancy alone is not relearning.

C Same acquired parent; all subsequent κ writes frozen

Two parents at 320 → retain, erase or mass-mean homogenize κ; body / energy / records / RNG matched.

All fields: t = 768, 32 × 32 periodic coordinates; blue density at one scale (saturates at ρ = 0.8).
Green / red: positive / negative evaluation field. No birth; M = 24. Two parents, not six independent repeats.
Actual outcome transfers / basal / movement recorded; sensing hardware, computation and communication unpriced.
